GitHub: https://github.com/sania-shamim

SUMMARY

BCA student who builds fast, mobile-friendly web apps with HTML, CSS and JavaScript on the front end, and Python (Flask) and Node.js on the back end. Four projects are live and public on GitHub, including a full-stack scholarship finder, a voice chatbot and an AI-powered expense settlement app. Looking for a frontend or backend internship to work on real products and learn from an engineering team.

SKILLS

Languages: HTML, CSS, JavaScript, React.js, Python, C
Backend and APIs: Flask, Node.js, REST APIs, Google Gemini API
Databases: PostgreSQL, SQL, DBMS
Concepts: Responsive Design, OOP, Data Structures and Algorithms (DSA)
Tools and Deployment: Git, GitHub, GitHub Pages, Vercel, Render, Canva

PROJECTS

Scholarship Finder

Python (Flask), PostgreSQL, JavaScript, Render
Live: https://scholarship-finder-jl2r.onrender.com/

- Matches students to West Bengal scholarships by age, gender, category, state and family income, using rules stored in a database.
- Built a Flask API with a PostgreSQL database and a JavaScript front end; deployed live on Render.
- Responsive layout that works on mobile screens.

Callwise - Voice Chatbot

HTML, CSS, JavaScript, REST API, Render
Live: https://callwise-lz0s.onrender.com/

- Chatbot that takes voice input and speaks its replies aloud, with a modern chat-style interface.
- Front end sends messages to a /chat API endpoint and displays responses in real time.
- Deployed live on Render with the code public on GitHub.

Lab Aggregator

HTML, CSS, JavaScript, Node.js serverless API, Vercel
Live: https://lab-aggregator.vercel.app/

- Search lab tests and health packages by name and pincode, and compare prices across providers.
- Sorts results by total price (offer price plus home collection fee) and shows packages that include the searched test.
- Mobile-friendly cards with MRP strikethrough, price breakdown and NABL badge.

Gather - AI Group Trip Expense Settler

JavaScript, Node.js, Google Gemini API, Render
Live: https://gather-8frs.onrender.com
Code: https://github.com/sania-shamim/gather

- Reads a pasted or uploaded group chat and uses the Gemini API to extract each expense (payer, amount and who shares the cost) as structured JSON.
- Settlement algorithm nets each person's balance and calculates the minimum set of transfers needed to settle up.
- Mobile-friendly web page that shows the total trip spend and who pays whom.

EDUCATION

Bachelor of Computer Applications (BCA) - Aliah University, Kolkata | Expected graduation: 2029
Class XII (ISC) - Grace Ling Liang English School | 78.75% | Passed: 2025
Class X (ICSE) - Grace Ling Liang English School | 85.4%
